

## Marketing

*Eleanor has challenged Rachel to showcase her skills at assessing if the price is right for some groceries, through a showdown with other shoppers.*

Rachel has to participate in two games that may seem familiar, but are original and unrelated in rules to anything else out there.

In the first game, three other shoppers Cliff, Mark and Jay, had submitted their price guesses (in cents) for the following bargain items. For them to win, all three of their price guesses need to match the item's code together. But their guesses were all a little off as indicated below, so it is now Rachel's turn. Thankfully, she knew the prices of these items, and so managed to do a shade better to even figure out all the actual price guesses of the other shoppers, and advance to the next bonus game.

Cliff	Mark	Jay	Groceries
155 under	215 under	175 under	Blanched almond flour
150 under	12 under	22 under	Brown rice
190 under	75 under	15 over	Chocolate bar
240 under	150 under	185 under	Lemon chiffon cake
5 over	155 under	15 over	Lime leaves
180 under	240 under	150 under	Mint cream cookies
108 under	63 under	15 over	Olive oil
210 under	100 under	5 over	Orange juice
176 under	115 under	156 under	Plum wine
220 under	83 under	69 under	Salmon fillet
225 under	79 under	6 under	Tomato sauce
145 under	207 under	149 under	Wheat bread

In the second bonus game, Rachel had to recall the order of the spaces in a familiar big spinning wheel, and use that to translate all the corresponding price guesses that she had figured out from the previous game. Though there was a long standstill, Rachel eventually managed to remember which space the wheel always starts spinning from, and decoded all the price guesses correctly to win this challenge.
